

Nikita Veisman

Senior Frontend Developer (React / Vue / TypeScript)

Valencia | nikivay312@gmail.com | [LinkedIn](#) | tg: @veismanns |

Summary

Senior Frontend Developer with 6+ years of experience building high-load web and cross-platform applications. Contributed to international products, including a crypto wallet with Web3 integrations and enterprise-grade systems, with a focus on frontend architecture, performance, reliability, and maintainability. Skilled in modernizing legacy codebases, leading TypeScript migrations, and designing scalable frontend solutions in close collaboration with backend and product teams.

SKILLS

- Vue, React, Python, Node.js, Vuex, Web3.js, Redux, Playwright
- Electron, Cordova, REST API, HTML5, CSS3, Sass, Webpack, Babel
- Docker, Git, Jira, Less

Languages: English (B1), Russian (Native)

PROFESSIONAL EXPERIENCE

Atomic Wallet, (Estonia) - international crypto startup with customers in the US and Europe

Frontend-mobile Developer

September 2024 –

May 2026

Responsible for the development and optimization of the frontend architecture of a high-load cryptocurrency wallet, with a focus on performance, security, stability, and developer experience.

- I refined the backend authorization logic during the transition from a JWT-based scheme to server-side sessions: I implemented server-side user session management and integrated it with the client application, which improved security and control over critical login scenarios.
- Reworked token balance calculation and transaction-processing algorithms, reducing data inconsistencies and decreasing token refresh and calculation time by 20%.
- Reduced mobile application load time from 40 to 20 seconds by introducing the p-queue library for new processing logic and optimizing token loading.
- Improved the team's developer experience by reworking build and local development workflows, extracting a dedicated Webpack configuration for development, and introducing Docker, which reduced new developer onboarding time by 4x.

OPUS, (Japan) - large-scale full-cycle software development company

Frontend-mobile Developer

June 2022 –

September 2024

- Improved release stability by establishing a practice of validating critical user scenarios before production releases, eliminating key defects before deployment and reducing the volume of urgent post-release fixes.
- Redesigned the notification delivery flow in a desktop application, increasing delivery reliability by 30% and reducing the risk of missing important user events.
- Led a systematic legacy code refactor by decomposing overloaded components, removing duplicated logic, and optimizing rendering, which reduced unnecessary re-renders by 30%.

IT2G, (Russia) - system integrator for full-cycle IT projects

Frontend Developer

October 2020 – June 2022

- Improved sprint planning and task decomposition, increasing team delivery predictability and reducing development errors by 20%.
- Optimized interface performance on mobile devices by replacing resource-intensive CSS animations with requestAnimationFrame-based logic and reducing unnecessary re-renders with React.memo, which cut frame drops on low-end devices by 2x.
- Led a team of developers, defined technical approaches, and broke complex functionality into executable tasks, improving team efficiency and reducing issues during development.

LIVREZON, (Russia) - platform for educational and publishing content creation

Fullstack Developer

September 2019 – October 2020

- Improved application scalability by designing and implementing a service communication system and interaction rules using Kafka.
- Simplified application navigation and improved overall performance by developing a new interface, introducing new logic, and optimizing the product for different devices.

HIGHER EDUCATION

Ivanovo State University (Russia)

Information Technology and Higher Mathematics

ADDITIONAL INFORMATION

Based in Valencia (Spain), but also can work from Tbilisi (Georgia)
